SUCTION LIFT LOSS

Calculate actual peristaltic pump suction lift based on elevation.

Note: Suction lift is the total vertical distance from static water level to peristaltic pump head.

Suction lift H₂O ft. at sea level – (Elevation in ft. x .00115) = actual H₂O suction lift at elevation.

Example: Size 15 silicone tubing has suction lift of 29 feet at sea level. Used with a Geopump at 5280 feet elevation, calculation shown here. 29 – (5280* .00115) = 22.9' actual suction lift.
